

# Multiwavelength SED decomposition (SEDModel v2)

$M_{\star} \approx 3 \times 10^{10} M_{\odot}$ ,  $\text{SFR} \approx 10 M_{\odot} \text{ yr}^{-1}$ ,  $\log L_{\text{bol}}^{\text{AGN}} = 10.5$

Rest-frame frequency  $\nu$  [Hz]

- Stars (intrinsic, no dust)
- Nebular + shock (residual)
- Stellar continuum (attenuated)
- Dust emission (DL07,  $U_{\text{min}} = 5.0$ ,  $\gamma = 0.1$ ,  $q_{\text{PAH}} = 1.0\%$ )
- AGN — K&D 2018 ( $\log L_{\text{bol}} = 10$ ,  $a_{\star} = 0.7$ , disc+warm Compton+corona+torus+polar dust)
- X-ray (XRBs + AGN corona — pipeline)
- Radio (SF synchrotron + AGN jets — pipeline)
- Total (predict\\_rest\\_sed)
